this, and that's the reason I want to ferret some of this out. The other part I would have, and I know this is your time, so stop me, if you want to,...

SENATOR CHAMBERS: That's okay.

SPEAKER KRISTENSEN: ...the employee may want a genetic test. I assume that nothing prohibits the employee from saying, look, I don't have any of these deficiencies, I have a genetic test, take this and consider it. This restriction is on the company doing it to the employee, not the employee presenting it or using it for whatever purpose they have. Would that be correct?

SENATOR CHAMBERS: Yes, and in order not to repeat what you said, Mr. Speaker, I agree with all that you have said, and nothing that you have stated goes contrary to my intention or understanding of what the purpose of adding this amendment to the bill would be. I want to emphasize in my own words affirmatively again, though, this is not an amendment designed to overturn the right of the company to obtain and use any of these credits it would otherwise be entitled to.

SPEAKER KRISTENSEN: Okay. Okay, thank you. Well, it's your turn, your time.

SENATOR CHAMBERS: Oh, that's right.

SPEAKER KRISTENSEN: I'll let you continue and...

SENATOR CHAMBERS: I am so agreeable and it's so, so seldom that I'm giving other people time that I usually will just give up the mike. Members of the Legislature, I don't know if Senator Brown's amendment talks about what Senator...what the Speaker and I spoke about, but what I want to make clear is that I'm willing and I think it would be a very good idea to put into the bill the material from LB 432 that answers the questions that the Speaker raised so that everybody will be on notice as to what this language is referring to, so that no company or company employee, through inadvertence, could say, well, I happen to run afoul of that because I didn't know what the Legislature was talking about. I have no objection whatsoever
